

Assisted Living

The Assisted Living module is designed for the Freestanding Assisted Living Facility or as an add-on module to accommodate the unique requirements of Assisted Living within the CCRC multi-level environment. Full integration with AnswersElite, including AOD's nationally recognized multi-company features, makes this the most powerful Assisted Living Application on the market today.

Admissions and Management

The Assisted Living Module works hand-in-hand with the Admissions & Census module and provides for daily tracking of Facility, Admission Status, Unit Number, Unit Type, Payor Type, and Resident Profiles. It also includes:

- Ability to create resident profiles that include Demographics, Medical Information, Contacts, Insurance, Financial, Extended Leave, Parking and Storage, Entrance Fees, Notes, HIPAA notes and Admission History. User Definable screens are also available.
- One profile is created per Resident and many Admissions records can be attached to the profile as the resident experiences campus movement. Preadmissions are also allowed.
- The ability to include Resident Photographs, link file attachments or scanned documents, user defined face sheets and the ability to send e-mail directly from the Profile.

Assessments and Service Plans

Demographic information “walks over” to the Medical Records module from the resident profile, minimizing duplication of efforts and reducing the likelihood of errors.

- The Smart Chart tabs are tailored to meet the Assisted Living environment
- User defined assessment tools, with scores that determine level of care based on a tiered score range which automatically integrates to Admissions, Census and Billing.
- Reasons for Assessment codes define the business rules for updating the Level of Care (Beginning of Next Month, Beginning of Current Month, Assessment Date, Admission Date, etc.).
- Assessment items link to and automatically trigger the creation of a Service Plan.
- User defined Service Plans with flexible labels to designate Problems/Needs, Goals and Approaches/Interventions.
- Approaches can link directly to the Problem or to Goals.
- Service Plans generate user-defined Daily Care Work Sheets.
- Daily Charting is driven by the Service Plans and user-defined Time Groups. The one-click Quick Chart option permits for multiple resident charting.
- Create Alerts and Assignments from Service Plan Charting.

Reports

- Resident Assessments print by resident, facility, resident due date (current or future date) or by unit.
- Level of Care Summary
- Service Plan Printing with multiple print options including:
 - selection of residents
 - disciplines and designations for Problems/Needs, Goals and Approaches/Interventions
 - resolved/unresolved
 - many other filtering and printing features
- Service Plan Statistics
- Service Plan Calendar
- Service Plan Charting
- Flexible printing in the Worksheet option includes:
 - resident and discipline schedules
 - service plan assignments
 - bath lists
 - laundry lists
 - other user defined options including worksheet styles and additional information
- Resident Form Printing

Integrates with

Admissions & Census, Alerts & Messaging, Enterprise Scheduling, Medication Databases, Medical Records, Resident Billing, Resident Marketing and Workflow Management

Key Features

All tables have the ability to be modified to meet the individual specific needs of your Assisted Living facility.

User-defined query reporting range and multiple sort filtering options.

A multitude of settings for management companies and/or several legal entities.
