

Care Plans

The Care Plan module can automatically generate Care Plans by RAP/Trigger cross reference as defined by the user. This will save time and ensure that all triggered RAPs are identified and addressed in accordance with sound clinical practices and provides for a systematic flow of information from the MDS to the RAPS and the Care Plans. Other key functions include:

- Smart Chart feature enables the end-user to “toggle” between all the clinical modules for a given resident, including the Care Plans, reducing the amount of time required to address all the paperwork issues of an individual resident and enabling the clinician more time to spend on care.
- Easy-to-create plans of care, Interdisciplinary notes for evaluation, and flow sheets, as well as printed reports and analysis that can be used for implementation of Quality Improvement and Monitoring Systems.
- Featuring a user-friendly format, focusing on the interdisciplinary approach to resident care in the development, implementation, and evaluation of the resident’s care plan.
- A Care Plan Face Sheet is provided in an easy to use tabular format to assist in coordinating Resident Conferences.
- Care Plans also feature the unique functionality to be proactive in the setup of a resident’s plan of care, which may reduce the risk of unfavorable surveys and monetary penalties.
- The Elite Care Plan feature enables each facility to easily customize the Care Plans and Database to their own individual needs and the individual needs of residents. This feature allows the facility to link Problems with specific Goals and Approaches for fast, easy, problem specific selection from the database.
- AnswersElite provides an integration of clinical modules that will promote improved resident outcomes, ongoing regulatory compliance, and continuous survey readiness.

Reports

- Approach Charting
- Care Plan Printout in Multiple Formats
- Display Residents Report
- Goal Date Reports
- Problem Date Reports
- Problems Lists
- Resident Care Assign Sheets
- Resolved/Unresolved/All Problem List

Integrates with

- Admissions and Census
- MDS
- Workflow management

Key Features

A pre-defined library is supplied based on the RAPS codes with the ability to be modified to meet the individual specific needs of the facility.

Custom Care Plans can be created on-the-fly

A second library for Assisted Living Service Plans can also be added.
