

Enterprise Scheduling

The Enterprise Scheduling module is an electronic calendar, similar to Outlook that fully takes advantage of the integration of features already established within the comprehensive AnswersElite.

The calendaring feature is enterprise-wide and includes all employees, all residents, all staff, and all facility resources. You determine through filter options what schedule you wish to create, view and/or print.

- Create Resident Schedules, Employee Tasks and schedule your organization's Resources.
- Recurring Appointments are scheduled once and the system will automatically complete the calendar to the end date or on-going.
- Schedules and calendars can be viewed on line or printed.
- The color-coded schedule is easily read.
- Calendar views are daily, weekly and monthly.

Reports

- Appointments
- Assignments
- Disciplines
- Residents
- Facility Resources
- User defined Reports

Integrates with

Assisted Living, Medical Records and Home Health

Key Features

All tables have the ability to be modified to meet the individual needs of your facility.
