## Point of Care

### Touch Screen Documentation

The Point of Care module is an easy to use touch screen entry for CNAs which includes documentation of ADLs, Care Plan items, Vital Statistics and more from one centralized area. The system automatically updates the MDS and is part of the Electronic Health Record (EHR) for each Resident. Clinical managers are able to access trends and history in order to improve resident outcomes with proactive measures

#### Functions include:

- Includes all disciplines in the care process while giving the Residents a voice in their care.
- Aids in improving Medicare compliance and easier Surveys.
- Connects directly to the Care Plan completing your "Circle of Care."
- Delivered via an easy, accurate and intuitive touch screen format.
- Gives the ability to personalize to your organization with additional items like shower days, weekly weights, monthly weights and supplements.
- Touch Charting for CNAs with an easy point and touch interface by disciplines, assignment and shift.
- Easy to use during care conferences.

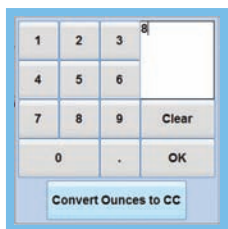

### Top 5 Benefits

- Easily and accurately updates the MDS with drill-down capability to observations
- Increases RUG Scores and ensures accuracy
- Improves clinician's ability to quickly and easily detect any significant changes in condition and trends
- Empowers your front line staff with a sense of contribution
- Automatically updates the EHR for one master Resident record

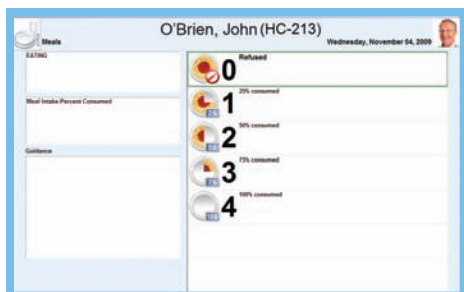

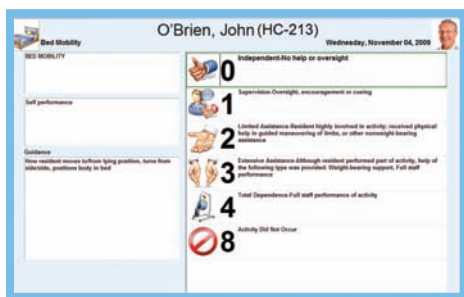

- CNAs can document on all Care Plan items and vital statistics from the same area as ADLs!
- Updating MDS appropriately for the best RUG score to improve reimbursement.
- Access during surveys on-the-fly from one system.

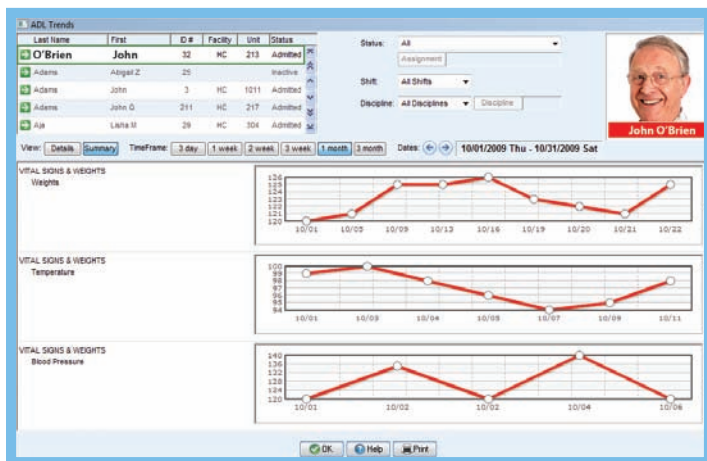

- Drill-down documentation right from the MDS itself with the observations from the lookback period highlighted!
- Easy to create PRN instances of items.
- Create alerts and add notes directly from the Point of Care.
- Easier data entry: Convert ounces to cc's with a click of a button for fluid intake.

- Includes intuitive pictures for ADL answers.
- Also can easily track if Resident cancelled, refused or was not available.
- Includes vital stats like blood pressure, weights, temperature, pulse, respirations and oxygen, and then automatically updates the Electronic Health Record (EHR).
- CNAs can get credit for the work they perform and contribute to increased reimbursement.

- Provides guidance and reminders to CNA staff throughout their shift.
- Clinical Decision Management Features:
  - Easy setup of the ADL and Daily Care List with recurring and rules-based charting.
  - See history and trends over time across all documentation entries.
