

Unit Refurbishment

The Unit Refurbishing module features scheduling and automatic generation of work orders for the remodeling process. It also includes:

- Fixture code tables and unit templates are available to minimize data entry.
- Location profiles are created to schedule and monitor the refurbishing progress.
- Scheduled maintenance can also be recorded and monitored on the location profile.
- The system provides data on past due and statistical information on all locations.

Reports

- Fixed Maintenance Due Register
- Refurbishing Units for Sale
- Refurbishing History Reports
- Refurbishing Cost History Reports
- Refurbishing Cost Worksheets
- Refurbishing In Process Register
- User Defined Reports

Integrates with

Admissions and Census, 1st and 3rd Party Billing, General Ledger, Resident Billing and Preventative Maintenance.

Key Features

All tables have the ability to be modified to meet the individual needs of the facility.

Range and Sort options allow user to query the data in a multitude of user-defined options.
