

User Defined EMR

The User-Defined EMR (Electronic Medical Records) module provides the ability to create and maintain complete and comprehensive assessment forms that a user can customize to a facility's specific needs. Features include:

- The availability of 14 pre-built assessments that can be modified to meet a facility's needs.
- Additional assessments can be entered to define the categories that the user wishes to assess.
- Features a user-defined format that provides the ability to customize assessments.
- Provides the ability to automatically update the MDS and Resident Profile from data entered in assessments with the click of a button.
- Provides the ability to automatically update the assessments from data entered in the Resident Profile.
- "Score Points" feature allows user to define "points" for applicable fields which can then be totaled as needed.
- "Crosswalking" allows linking of selected data items from one assessment to another without data entry.
- Print preview functionality allows the user to see the page before printing.
- Users assigned with appropriate security level have the ability to lock and unlock forms.
- Provides for easy transfer of forms from one company to another.
