Dashboarding & KPI

Data Visualization and Decision Support

The AnswersElite Dashboarding & KPI Module delivers greater control of your organization's performance with its powerful dashboard technology allowing you to not only visualize your data in the most meaningful ways but also enabling you to quickly take action. Your organization's decision makers can receive notifications based on values of your Key Performance Indicators (KPIs) so they will know when an indicator moves out of a predefined range. Trending analysis allows you to take snapshots of your data at set intervals and then compile these into a single view, giving you an accurate trending of various areas of your operations.

Top 5 Benefits

- Discover trends, exceptions and root-causes of issues
- Intervene quickly in order to improve quality of care at your facility
- Access your information anywhere
- Enable your management team to have snapshots of your data
- Harness industry best practices to deliver better care
